

DCCC Front-End Developer Test

QUESTION 1

Choose an open JSON feed (lots of examples here <https://goo.gl/zVe6St>) and build a single page which pulls data from that feed to tell a meaningful story. You are free to use whatever data source, frameworks, and libraries you would like, but the story you tell should come across over both desktop and mobile. Put the page up on a free service. When complete, please send us the URL to your page and the code itself.

QUESTION 2

Brainstorm a more complex web application that you think could help activists, organizers, or campaigns to do their work more effectively. It could be a simple utility that meets a common need, or a whole new complex software tool.

1. Write one user story for a particular role that might interact with this tool. Here's some info about that: <http://www.subcide.com/articles/how-to-write-meaningful-user-stories/>
2. Draw out a simple wireframe that illustrates what your application can do. Artistic ability is not relevant here! If you like, you can use a tool like Balsamiq Mockups: <http://balsamiq.com/download/> (or just MS Paint, or anything of your choice)
